

Questionnaire - Low Carbon Energy for Christ Church

As described in the consultation information, Christ Church PCC are considering whether we should invest in a low carbon energy system for the church. We would like as many views as possible from our congregation on this and would really appreciate if you could complete the questions below and return the form to the parish office.

In principle, would you be in favour of installing solar panels to the church centre?

In principle, would you be in favour of installing an air-source heat pump to replace the boiler in the church centre?

Either installation would require significant fundraising, >£10,000.

Would you be prepared to contribute financially to this investment for the church

Do you have any positive or negative experience of solar panels or heat pumps which you would like to share here?

Do you have any working knowledge of solar panels or heat pumps and are you prepared to help obtain quotes and oversee installation?

Any other comments?
